TELEGRAM BOT

How to report an error with the bot

A guide for operators

GLP-C · GLP-C1 · SMALL-P3

07.11.2026

THE FLOW

Eight steps. One minute.

The bot asks one question at a time — there is little room to go wrong.

01

Photo

to the error topic

02

What's in the photo

Robot / Charging / Workstation

03

Number

3780 · 137 · C2-H146

04

Model

usually automatic

05

Module

where it broke

06

Error

what happened

07

Cause

why

08

Confirm

send

The bot usually fills in the model from the registry — you will not see step 04.

BEFORE YOU START

Link your Telegram

Once, before your first report.

/reg Ivan Petrenko

The name as written in Lark.

Check the link: /whoami

Without the link the report is saved, but “reported by” stays empty —
that is how 11 % of reports arrive today.

STEP 01

01

Photo

One photo — one report.

WHAT TO DO

Attach one photo to a message in the error topic.

No caption needed — the bot asks everything itself.

A photo, up to 25 MB.

WHAT HAPPENS

The bot deletes your message — the topic stays clean.

It sends the same photo back with a question and buttons.

Sometimes it recognises the unit and skips the first question.

Why — the photo goes to the Lark card and the journal: it is how the fault is reviewed.

STEP 02

02

What is in the photo?

One of three buttons.

Workstation

A workstation, conveyor
or pick station

WHEN

Conveyor stopped,
item stuck

Charging station

The charging station itself,
not the robot on it

WHEN

Not charging,
rebooting

Robot

A robot: K50H, A42T,
A42T C2

WHEN

Not moving, not lifting,
emergency button

Floor QR code: there is no separate button — report it via Robot → QR Code.

03

Number

One message. The number only.

Robot	3780 or H108 — digits, or H + digits
Charging station	137 — the station number, digits only
Workstation	C2-H146 — the code on the label

Several devices — separated by a slash: **3545/314/141** → three separate records.

Why — the number links the record to the card, the warehouse and the zone.

03

If the number is not in the registry

Format is strict. The registry is lenient.

Not in the registry: Robot 9999.

Save anyway? The entry will be marked for review.

Confirm — save and mark it for review.

Edit number — go back and fix it.

If you type a description instead of a number, the bot asks again.

04

Model

Usually this step does not exist.

The bot takes the model from the registry by number.

K50H

mini robot
(HAIFLEX)

A42T

large robot

A42T C2

C2 version,
with Hook

The question appears only if the number is unknown or the line mixes models.

05

Module

Where exactly it broke.

K50H	Chassis · QR Code · Safety · Lifting · Network · Other · Program Bug
A42T	Chassis · Lifting · Rotation · Tray · Horn · QR Code · Safety · Fingers · Network
A42T C2	Chassis · Lifting · Rotation · Tray · Horn · Hook · Safety · QR Code

The module is “where”. The error is “what”.

06

Error

Choose what you see. The wording is fixed.

Chassis	Went off the road · Robot's collision · Stop · Unable to rotate
QR Code / Lifting	QR Code dirty · Mechanical · Can't lift up/down the fork · Lost container
Safety	Front emergency button is trigger · Rear emergency button is trigger · Safety bumper trigger · Safety system disconnect
Rotation / Tray / Horn / Hook	Can't rotate fork · Can't extend/expand the tray · Can't extend/expand the HORN · Can't extend/expand the Hook

07

Cause

Why it happened.

Chassis Obstacle · Collision · Mechanical · Software fault

Safety Human error · Mechanical wear · Safety Vest

Charging Power or cable · Station fault · Battery fault

None of these — pick **Other**.

The bot then asks you to describe it in one message.

The more precise the text, the more useful the review.

The error is “what”. The cause is “why”. Two different metrics.

09

Check and confirm

Object	Robot
Device	8066
Module	Chassis
Error	Went off the road
Cause	Mechanical

Confirm · Edit selection · Cancel

Confirm — send. **Edit selection** — to the number. **Cancel** — discard.

A check before saving: fixing it here is cheaper than finding it in the journal.

AFTER CONFIRM

Saving…

Error report saved

Journal · Supabase · Lark

Unknown number → Needs review

RESULT

One record. Everything inside.

Example: record 445928, 06.11.2026.

Warehouse	GLP-C
Number	8066
Module	Chassis
Error	Went off the road
Cause	Mechanical
Description	The robot left its route — template text

AUTOMATIC

warehouse — by number

zone — by unit

shift — by time

author — from /reg

photo — from the message

Common issues

“Reported by” is empty	Run /reg and send the report again
“Please try again”	The number contains text — enter digits only
“Not in the registry”	Edit number — typo · Confirm — new unit
The bot ignores a photo	It is not a photo, or not the error topic
Edit selection went to the number	By design — walk the branch again

Almost every issue is a wrong number format or a wrong topic.

The whole guide

01	/reg Your Name — once
02	Photo — to the error topic
03	Workstation / Charging station / Robot
04	Number — 3780 · 137 · C2-H146 · several via /
05	Module → Error → Cause
06	Other — describe it in words
07	Confirm — send

Keep this page — the bot will guide you through the rest.
